

What plugins to use and how to copy them easily?

Posted by Liberum - 2010/08/30 15:54

Hi,

which plugins to use for our WP sites? I don't mean in general, but the plugins used for our 'ABS build' sites.

And how do we copy the plugins easily to another site? Can this be done somewhere in the dashboard or through Filezilla? I really have no clue, so please keep the explanation step-by-step ;)

Really hope this can be done easily, this would be a huge timesaver.

You can check out the top plug-ins i use.

I usually use FileZilla and take a backup of the wp-content/plugins folder after I install all of them in one blog and upload to all my other blogs at once so I just have to go to the dashboard and activate them.

Regards,
Carty..

Thanks!

I remember you talked about video tutorials for the ABS software a while back. Is this video serie already finished?
