

[HELP] Activation not working

Posted by lugus1 - 2010/08/05 18:14

Sorry, now I am starting to feel needy. I enter the activation code and press activate. It connects to server then a box pops up with the connection speed. I dismiss it with the ok button then I wait. The activation box stays on the screen doing nothing. If I close the program and run it again I am still in demo mode. Has my key run out because I did not use it yesterday when I received it?

ps. I have just sent an email via the contact form containing the computer name and activation key.
pps. It creates an empty file with the same name as the activation key number.
