

[BUG] Loading .png from local PC broken

Posted by lugus1 - 2010/08/06 04:10

If I select .png as file type in the load image box for a local PC it lists .gif types and not .png despite only having the ability to pick .jpg or .png. Can we just have it so you can select all files .* please.

You can ofcourse see 2 options. One is "files" and the other is .png. Simply choose "files" and you can see all files there. Can you check again and tell me?

Regards,
Carty..

The 2 options that show in the drop down box are exactly as shown below:

files(*.jpg)
*.png

The first option shows only jpg the second shows gif instead of png

This unfortunately means there is no way of loading a .png which is my most common format.
