

Yahoo Answers

Posted by joshuama - 2010/08/09 10:58

Hey, Guys.

I joined ABS today. Just got a question. I am trying to add a yahoo answer feed for a specific search string. So I type in a certain keyword then grab the rss feed. However I am not able to format it properly. When posting it to my site. it shows up with a lot of extra stuff.

Any tips how to format a yahoo answer feed the best way possible?

For example I dont want "open question:" to show up before all blog posts.

Many Thanks,
Joshua

Joshua, if you want to remove a common word at the beggining of each post, enter the common word in the 'Remove before' text field while adding the feed. Same for removing text at the end of the feed.

You can also try between a known location mode of extraction to be more specific on the content block but it may slightly be advanced for many.

Regards,
Carty..
