

## Version History Change Log

Posted by Carty - 2010/03/12 07:08

---

Thank you for using the most powerful Auto Blogging Software.

This page will be updated with the version history and change log. Anytime you can download the latest version from this link. It works in trial mode and can be activated to full version with a unique Product key provided immediately after purchase.

Feb 2010: Initial Beta Release

This version was released to a limited number of beta testers who helped in fixing the bugs.

1 March 2010: Version 1.0 Public Release Build 227

\*Fixed ALL the bugs and released officially.

12 March 2010: Version 1.0 Public Release Build 239

Automatic Update FeatureHenceforth, the software will check for new versions automatically on opening and prompt you for new updates if available. Can also apply the updates automatically.

22 March 2010: Version 1.0 Public Release Build 280

Importing of PLR ArticlesYes, the much awaited PLR Import feature is now implemented. Right click on any Blog that you have already added and you will find an option to Import PLR articles.

The articles can also be translated (more than once) to make them unique.

\* Improved compatibility with a lot of Atom type of feeds. Especially the ones published by Blogger.com\*Fixed some feeds where images are not extracted when "Proprietary Extraction" method was used.25 March 2010: Build 283

\* Minor issue while loading PLR articles onto the software has been fixed.

3rd April 2010: Build 287

\* Improved compatibility with more feeds.

\* Fixed a bug when some punctuation marks get posted as weird symbols.

\* Added rel=nofollow attributes to original article link backs.

6th April 2010: Build 295

\* NEW: Ability to edit already added Feeds/Blogs.

\* NEW: FTP information last entered is saved and loaded automatically for adding next blogs.

\* No bugs found to be fixed.

20th April 2010: Build 297

\* When you add a feed, the category list of all blogs is displayed rather than just the ones for the chosen blog. Fixed now.

\* Added Error Logging support. If you want to log errors, simply create a .txt file in the install folder and name it ErrLog and if the software encounters any error, it logs it there.

29 July 2010: ABS 2.0 Public Release Build 529

A lot of new features were added. Such as a powerful Rich Editor in WYSIWYG style, ability to add YouTube videos, Flickr images, eZine articles, ClickBank and Amazon affiliate products and many more..

4th Aug 2010: ABS 2.0 Build 533

\* Images were not referenced properly, fixed.

\* Delete feed items with right-click menu option fixed.

\* eZine article translation fixed.

26 Oct 2011: ABS 2.0 Public Release Build 585

Software is now integrated with The Best Spinner to re-write content automatically! More details here.

6th April 2010: Build 295

yesterday updates detected and i download version 295

but trouble my connection

and now my software still in 287

and not auto updates

can you help me to updates manually from 287 to 295 carty

thanks

Download this file, Unzip the contents into your Install folder overwriting old ones and tell me if it manually updates to latest version.

Regards,

Carty..

Hey Nick,

I'm having the same problem as gandensang. I have ABS version 287 and even though I have a good connection, ABS is not even detecting that there is a newer version.

I've downloaded the file you have specified, but don't know what to do with it. When I unzip it and try to run it, it doesn't work, but I'm doing this in the download folder. I'm not sure what you mean by the install folder...

---

You need to unzip the contents to your install folder. It is the folder where you have installed the software. By default, it will be: C:\Program Files\CartyStudios Corporation\WebMagnates - Auto Blogging Software

Regards,  
Carty..

I just tried that, but it doesn't work for me.

When I launch ABS, it says checking for latest version (it did that before as well), but doesn't seem to find a later version than 287...

Ok, I just notices that 287 is the latest build. 295 is actually the last but it still reflects as 287 in the splash screen :)

Regards,  
Carty..

I tried to update the software but Norton Antivirus detected a security risk. The message I received was "SONAR has detected security risk absupdater.exe." "SONAR has removed absupdater.exe."

Any ideas on how to fix this.

J.R.

Can you tell me which version are you using now? If you're using V2, simply uninstall the software, install new version downloaded from <http://www.WebMagnates.org/ABS2.0.msi>

The data folders should remain intact even after un-install or you may even take a backup of the install folder to be on safer side.

Regards,  
Carty..
