_____

Thanks for this great product

I just finished my first site http://stopthebutt.blogspot.com
and only 49 more to go

I am not too sure about the auto part
The post ramdom setting will post to the blog at the times I set ie. 4 to 5 hours
All I have to do is hit post to blog and it will go on auto?
Do I have to check any of the boxes before I click post to blog?

Thanks John

_____

Good work on your first blog. Looking professional.

That's right. You have to check the boxes for the articles that you would like to be posted and press
"Post all marked items" button which will then schedule the posts with the random intervals like 4-5hrs.

Regards,
Carty..
