

## Bug - ABS Fails to Retain Post Selection

Posted by virtualvice - 2010/09/04 20:20

---

After updating the software, post selections for each feed must be posted/uploaded prior to moving onto next feed. Reason: when attempting to use the "post all" feature to upload posts from multiple feeds in one action, the soft only retains selected posts on last feed. Selections on other feeds are blanked out - not retained.

Are you sure, let the update process complete and then select a few posts from multiple blog/feeds. Try posting them and tell me if it goes fine.

Regards,  
Carty..

Hi Carty, it's working now. I allowed the update process to complete when encountering the problem, so not sure what was up. This is the first time I've had issues with an ABS update.

Thanks for the update.

Regards,  
Carty..
