

Cannot Update- Please Help!

Posted by danostumin - 2010/09/05 02:09

I have build version 2.0 537. The software will not update to latest version, and will not display the update screen since I pushed the "Ignore Update" button to see if it would still run. It does, but how do I get the update now?

Run 'ABS Updater.exe' that is situated in the install directory/folder.

That's right. Run 'ABS Updater' file from install folder (C:\Program Files\CartyStudios Corp.WebMag..)

PS: Thanks lugus for the heads up :)

Regards,
Carty..

I just close the software and restart it then a window pops up telling me there's an update available.

You can try manual upgrade:

Download: <http://www.webmagnates.org/corporate/absfw/ABS-Update.zip>

Unzip the file and copy contents to the software' install folder (C:Program FilesCartyStudios Corp.WebMag..) overwriting the old ones there.

Then open the software and it should be updated.

Regards,
Carty..
