

Problem with charset - iso-8859-2

Posted by entropy - 2010/09/10 14:22

Hi

Program works fine but in extracted articles i see invalid letters (my language is Polish)

Can You fix this?

I found the problem:

if site was encoded in utf8 - everything is ok
but when charset is set to iso (for ex: charset=iso-8859-2) - we see the \$%#\$@%....

That's right. Only the standard UTF7 encoding is supported. It is actually a limitation in the controls I use.

Regards,
Carty..
