I managed to pull one set of feed ok but on my second and 3 blog the software don't seem to pull or update... I followed the video the same on the second and 3 blog... then adding some more feed to the first blog seems to have trouble also..

Even the PLR i have on my machine... was ok the first time but struggled the second time after turning off and on the software... not its don't even work on the 3rd blog..

Please advise

Your message is slightly confusing. Say you have added few blogs and few feeds under each blog. Feeds under one blog update fine but the feeds on other blogs don't update?

Regards,
Carty..

ok...

Sorry... i satrted the fiirst blog all was ok.... so i then started a second blog but the downloaded feeds

seem to struggle articles, rss, clickbank etc..... i thought it may have been the blog so i started a 3 and the downloaded feed completed stopped ... in the bottom corner it says downloading but nothing comes up... so i have deleted the second and 3 blog.... and now the 1st blog will not download...

Thanks

Wayne

Open the software install folder (C:\Program Files\CartyStudios Corp.Auto Blog..)

Delete the folder named "Data" there

Open the software to start fresh.

Add some blogs, feeds and tell me how it goes now.

Regards,
Carty..

Add the same feed to the first blog, update and tell me if it updates. Also, try updating the feed added to the first blog previously and tell me if it works fine.

Regards,
Carty..
