

Mac users - Parallels

Posted by dacoal72 - 2010/10/12 06:49

I was looking for any information on ABS users who are using a Mac (Parallels) to run ABS. My experience so far has not been very positive.. So I just wanted to see if anyone has any tips, tricks, suggestions on how to use ABS while running Parallels. I really don't want to ask Mr. Carty for another activation key (reinstalled Parallels twice now) until Im fairly confident I will not have to ask for a key for the 3rd time.

Thanks in advance for any feed back

Dan

Dan, what problem you experience so far on the Mac so I could provide some suggestions.

Regards,
Carty..

Well I think I have everything worked out at this point .. but i was having some issues with not being able to access some of the programs that were migrated over from my PC, then when I was able too the programs would shut down w/o booting up all the way.. but that seems to be fixed at this point, after upgrading to Parallels 6 (for Free) and reinstalling ABS and some others. I will have to ask for another key for ABS but will request that later through your Support@CartyStudios.com email.. I just want to make sure I can trouble shot any lingering issues before I activate ABS again.

Thanks
Dan
