

## Forum Problem - Posts Not Appearing ?

Posted by WebSolutions 4 All.co.uk - 2010/10/17 10:48

---

Hi Everyone,

I've had a few e-mails through stating new posts have been added to discussions I'm following but when I click on the link included in the e-mail, I get the following message:

An invalid post ID was requested.

This is from an example

<http://www.webmagnates.org/community/blogging/auto-blogging-software/auto-blog-software-purchase/Page-4.html#2277> link provided in the e-mail notification ...

Is there a problem does anyone know ?

Regards

Jane

Forgot to add, some topics I've posted aren't showing up anymore either in 'my discussions' ??

Odd ...

Jane

Carty,

One of my topics which contained some info I'd like to follow up on has vanished - has someone posted something which has upset things by any chance or has it been moved to another category - can you let me know please ...

Also, regarding e-mails from you - my hosts have asked for you to forward me the error message or bounce message you have received as they've looked into it and nothing seems apparent at the moment.

Can you also forward me copies of the replies to my other e-mails over the past week / 10 days please.

Sorry for any inconvenience, just use the alternative e-mail address I sent you yesterday.

Kind Regards

Jane
