

Deleting Selected Items

Posted by DigitalTraffic - 2010/11/07 15:34

How do I delete feed items that I don't want to post to my blogs.

I select them, then right click to delete them, however, they are not being deleted.

Any suggestions?

Thank you

I am having the same problem.

After adding a new RSS feed, click "update feed" to download content.

Some feed will show

"Sorry, I could not read the content from this page.

View the original article here"

I did force the RSS to update. That does not bring down proper content.

The RSS shows correctly in browser but ABS just can't download it.

Right click on this item to do "Delete Selected" does not work.

Select multiple items and right click on them to choose "delete Selected" Does not work.

The RSS link i was using

<http://www.imnewswatch.com/index.xml>

I hope there is a patch on these.

Thanks

After selecting a few items, try pressing the 'Del' key on your keyboard and it should delete.

Pineoz, you seem to be using a rebranded version of my software. Please contact your vendor for support.

Regards,

Carty..

Carty bonjour...

This still seems an issue. I've checked through the posts here, and applied the suggestions but without much success.

The only way appears to be to delete one item at a time, which is a bit clunky. :unsure:

Regards

You can do multiple deletes.

Select the first item, then hold down either the Ctrl key or the Shift key to select other items.

Holding down the Ctrl key allows you to select one item at a time.

Holding down the Shift key selects all items between your first selection and your next selection.

Once you have selected multiple items then hit the Delete key on your keyboard.

Works for me :)
