

Arabic Auto Blog

Posted by autoboggernewbie - 2010/11/13 16:43

I am trying to pull rss in arabic language, and the ABS is pulling the headline in Arabic, but the body of the article shows:

???????? «????????» ????? ????????? ?????????????????
??

which is obviously not helpful

then when I tick the headlines that I want to post and click on "post marked items", and post it the blog is not updated and there are no new posts.

how do I fix this?

Yes, the software works only with languages having english alphabets. Unicode characters not supported atm.

Regards,
Carty..
