

Amazon picture placeholders only

Posted by SteveB - 2010/12/28 16:56

I was able to FTP all of the Amazon pictures to my server using ABS but still only picture placeholders are showing. How can I connect the pictures so they will show in Blogger? I have tried erasing the posts and starting fresh with ABS a couple times but no luck - is there something simple I am missing - could it be that my hosting company is not giving Blogger sufficient permissions to access it from my hosting company server or my hosting company is not giving me sufficient priveleges to access with blogger?

Give me a link to one of your posts and I will look into it.

Regards,
Carty..
