

## not able to download feeds into software...

Posted by masalai - 2010/12/30 20:19

---

New user of the software, conceptually it looks great!!

I have 8 feeds setup in Google alerts, and have selected delivery as Feeds and not Email.

When I open up the feeds in Google reader there are lots of feeds in there, a couple hundred articles / PR's etc. in each of the 8 feeds.

When I try to "update" all feeds in the software, it just doesn't get very far.

It ads feeds to the first RSS Feed on the list, but even after a couple of hours it goes no farther.

I'm not sure what do to or what I need to change? It isn't downloading the data from the feeds though.

Please advise...

Right click on the feed name and select update on other feeds and tell me if it pulls in new stuff.

Regards,  
Carty..
