

## Feed Extraction

Posted by lbt1 - 2011/01/07 19:11

---

When using the 'Content is hidden between' option, is there any form of wildcard that i can use?

eg I want to start my feed after this:

21 de Octubre del 2010

however, the date is always changing, so i would like to use a wildcard such as:

\*.\*

naturally this does not work, but if there is an alternative way that anyone has managed something similar, I'd love to know.
