

Software Not Picking Up Categories

Posted by RKCastillo - 2011/02/21 19:01

I've added a couple blogs to the software and it's not grabbing any of the categories.

Can you help me?

What are the URLs of the blogs you are trying?

I will see if I can add them and then let you know.

Hi,

Did you find the solution for this? I just purchased the software and it's doing the same thing. Not picking up my categories. Hasn't posted to my blog either though when I click the post to blog button it says "already posted"

Didn't get a reply the first time, so I will try again.

What is the URL of the blogs you are trying to add?

I will see if I can add it and then let you know if the categories load.

I ended up getting it to work.

I checked both boxes in the writing section in the setting in wordpress that will allow outside things to post.

Then deleted the blogs from the software.

And re-added them.

Then it worked.
