

Help

Posted by cxking818 - 2011/03/07 15:36

I have the software installed and have entered the activation key but there are some problems.

The RSS feeds do not update properly, it will pull in a few feeds then get stuck. i can see in the status bar at the bottom Processing: but it stays on the same feed If i shut down and restart it picks up on the same feed and wont move forward.

Also it does not recognise the categories I have set up on my blog. I have sent multiple inquiries to support with no response. Does anyone know how to get suport for this product?
