I am having the exact same problem. I can't seem to get the software to open. It keeps saying "Checking for latest version..." and that's it. In order to get rid of the post I have to reboot my computer. I don't know why because my computer is just a little over 1 yr. old.
I NEED HELP PLEASE.

Thanks, Cathy

Please open the software' install folder: C:\Program Files\CartyStudios..WebMag..

Delete the file named Settings.txt there and tell me if it the software opens fine then.

Regards,
Carty..
