

Page Format Problem

Posted by raj_singh - 2011/06/14 08:44

Hi Carty,

I have problem with page format on ABS. You Can See it here.

Original Page/Article Looks like this

Powered by the latest and powerful 2nd Generation Intel Core processors
Pre-loaded with the latest Windows 7 Home Basic/Premium 64-bit OS
Optional interchangeable lids with different colors and prints
14-inch (Inspiron 14R) and 15.6-inch (Inspiron 15R)
Optional intelligent graphics – Switchable graphics according to the requirements .Uses
high-performance discrete video cards for graphics-intensive applications and automatically switches to
an in-built graphics for optimum battery/power usage .

On the post on the blog & ABS it looks like this

Powered by the latest and powerful 2nd Generation Intel Core processorsPre-loaded with the latest
Windows 7 Home Basic/Premium 64-bit OSOptional interchangeable lids with different colors and
prints14-inch (Inspiron 14R) and 15.6-inch (Inspiron 15R)Optional intelligent graphics – Switchable
graphics according to the requirements .Uses high-performance discrete video cards for
graphics-intensive applications and automatically switches to an in-built graphics for optimum
battery/power usage .

Feed Source usages

- - HTML Tags, But ABS is unable to read this.

How to fix this problem?

Thanks

Which version are you using?

Regards,
Carty..

Re:Page Format Problem

Posted by Carty - 2011/06/16 14:46

When you use the hidden between option, everything should be extracted! Are you sure the li tags are skipped? Or maybe they don't display properly in the content window, can you try posting to your blog and check?

Regards,
Carty..
