

[HELP] Too many posts on one day

Posted by jo4acuase - 2010/04/18 11:28

I have question. I also sent you a support email as i initially was unable to login.

Last night i created a blog and search for 3 feeds to my blog. However this morning i saw that 34 of those feeds were posted to the blog. Why did this happen?

Also now since all the 34 posts have been posted will this cause any issues with Google?

In your documents please provide people with warnings or give them heads up on certain items to do with posting. The current set up on my blog is 3 automated posts per day and schedule posts within 60 mins.

Please advice asap. Link to my blog posts.

Actually the Max Posts per day is unused at the moment. I think it is mentioned in the manual. Anyway, if you would like to make 3 posts per day, set the interval as 480 (24hrs/3posts*60mins).

At the moment you can't do anything about the already made posts. Don't worry, even it they delete the blog you can create another one as it is free.

Regards,
Carty..
