

Subdomain or sub folder Wordpress blog issue

Posted by stargaterich - 2011/06/27 06:26

I noticed that Autoblog Samurai software do not support self hosted Wordpress blog created in sub folder of the main domain. Is this a limitation of Autoblog Samura? I think it would be great if the next release address this issue.

For instance. ABS unable to configure the following namely say www.myhomebiznet.com/agingdog
I configured a subdomain to link to the above and the problem persists.

For instance=>agingdog.myhomebiznet.com

ABS still unable to detect and configure it properly.

I have enbled XML-RPC for the above Wordpress blog..

Auto Blog Samurai is a rebranded version. You must contact your vendor for support.

However, the feature you're requesting, works on my original version here:

<http://www.webmagnates.org/auto-blogging-software.html>

Regards,

Carty..
