

Latest version of ABS not working :(

Posted by niksng - 2011/07/02 10:32

Hi, I just purchased the latest version of ABS but it's not posting in my blogger based blog, but it was posting with the older version. The content that it is not posting is swf videos and images. Can you please help me regarding this matter.

It also automatically adds "type=html>" in front of every post and with 1x1 pixels images of the blog who's content i am coping, is it by default or is there a way to remove both of them.

Please help.
