

## Downloaded Feeds Are Empty

Posted by jamespereira - 2011/08/23 12:47

---

I created a new blog and set it up to pull feeds from Ezine, max 25 articles.

After it downloaded the article, I find that none of the articles have content.

All I see is this "text is null Parameter name:text"

What does this mean and how can it correct whatever is wrong?

Thanks

Which version of the software are you using?

Regards,  
Carty..

I believe you're with an older version. You can try manual update method.

Download: <http://webmagnates.org/corporate/absfw/ABS-Update.zip>

Unzip the files to your install folder (C:\Program Files\CartyStudios Corp.WebMag..) overwriting the old ones there and then open the software.

Tell me how it goes.

Regards,

Carty,

I've installed the new version and managed to download some new articles with one feed and posted them.

However, I changed the posting schedule of the blog in ABS but when I select the feed linked to the blog, the earlier posting schedule is still listed. Do I have to change the posting schedule for each feed? And how do I do that?

Thanks.

The post scheduling is managed automatically. This is set while adding the blog. If you want a particular article to be posted out of the regular schedule, use the individual post schedule setting option.
