

[bug] toggle button deletes content of feed

Posted by greenpig - 2012/02/14 14:18

Hi all, I have been using ABS for a couple of days now and keep getting what i think is a bug.

when i have selected a feed and proceed to edit for submission to our site, on occasion when i toggle between source and design mode, the content vanished leaving me with a blank content box.

I have tried toggling back and forth but still the content does not show.

Any help or suggestions would be great, as its getting a little annoying now.

Thanks.

Gary

Well

I think that the way it works, not a bug.

when you edit the feed, the software will think that you are doing the wrong step or somethings with your last items.

It's just not delete your item when you edit blog. if you edit feed it will.

Causing you can easily to get it's back in a couple of minutes

Good luck
