

valid xml

Posted by rvme - 2010/05/20 21:38

Trying to add one blog. (wordpress)

Getting error - "Response from sever does not contain valid xml."

Any idea why it is happening? (I already checked two checkboxes in Wordpress > 'Writing' area.)

Can you please email me the blog url. My ID: Owner CartyStudios.com

Regards,
Carty..

I don't know ... If anybody has this problem try adding the blog url like this:

<http://yoursite.com/blog>

INSTEAD of

<http://yoursite.com/blog/index.php>

It worked for me. No xml error after that ...

Right. You should not add the index.php at the end of the url.

Regards,
Carty..
