[SUGGESTION] Improve Auto Tagging or Remove It
Posted by Johnno - 2010/05/23 09:38

_____

Sorry to say this, but the autotagging feature of ABS is next to useless.

Here's some examples......

Post Title: Notes On Preventing Hair Loss
Tags: notes, Preventing

Post Title: Study Offers Insights Into Male Pattern Baldness
Tags: Baldness, Insights, Offers, Pattern, Study

Post Title: Hair Loss Prevention Tips
Tags: prevention

Is there any way to turn off the tagging feature?

Will using the Simple Tags plugin overwrite the tags created by ABS?

_____

Thanks for the suggestion. The auto tagging feature is quite simple and it takes just the words with over 5 characters. Most of the times it work but in some niches like yours 'hair loss', the words are ignored. Sure you can use the free 'Simple Tags' plug-in to generate more relevant tags on your blogs at the moment.

In my next version, I will consider improving the tagging feature too.

Regards,
Carty..
