

## Auto Blogging Software Suddenly Cannot Be Activate

Posted by jang83 - 2010/05/24 21:51

---

Firstly after my computer computer suddenly restart my autoblog software is being like picture below  
If I continues to open the software opening banner will not close like those image below.

Secondly, i countnt activate back the software with my activation key number. Its keep telling me its  
invalid key..Cartny Please help me

This is my invoice no  
LEJNPCWR.

\*\*\*\*\* JIT Debugging \*\*\*\*\*

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

The unexpected systemrestart without proper shut-downs might have resulted in corruption of the database. I could not see the images you sent me so I presume the error. If you ahve not added much of blogs/feeds to the software and don't mind adding them again, please delete the entire 'data' folder found inside the install folder of the software (C:Program FilesCartyStudios Corp.WebMag..).

Or if you don't want to loose the data, send me the file named 'MyBlogs.txt' present inside the 'data' folder. Before sending me the file, you may take a copy of it somewhere, open it, change passwords and then send me (if required :)).

PS: My email: Owner CartyStudios.com

Regards,  
Carty..
