

Program says its posted but nothing received

Posted by gerry - 2010/07/14 13:30

Can someone shed some light on this one,

I am currently in my first usage stage of the auto blogger and according to the software it says that I hae sent the post.

When I check my blogger back end admin there's nothing there or anywhere apart from one post that I made from scratch.

ie All, Drafts, Scheduled, Imported, Published

Is there somewhere where I need to adjust the settings to allow the software to publish apart from the login name and password?

Please help.

okay

Figured it out. If you are like me and you design your own templates, remember to set up your pages. I overlooked this and didn't realize until I saw that I had no pages listed.

Thanks for the update Glad you got it sorted yourself.

Regards,
Carty..
