

[Bug Fixed] Unicode Characters in Posts

Posted by ziplack - 2010/04/01 15:27

Rss Looks like this

For many years, the domain of men's underwear has remained firmly divided into two camps: briefs and boxers. However, over the last few decades, the variety and trends in men's underwear have evolved significantly – so much that owning fashionable underwear has become as important to many men as owning trendy outer garments!

On the post on the blog it looks like this

For many years, the domain of men's underwear has remained firmly divided into two camps: briefs and boxers. However, over the last few decades, the variety and trends in men's underwear have evolved significantly – so much that owning fashionable underwear has become as important to many men as owning trendy outer garments!

=====

When i download the rss form my source got some lil errors on the titles shows like this:

Lexmark's docmp simplifies document storage and retrieval

=====

just noticing

Thanks for reporting. Does the posts look fine in the software window? Which method of extraction did you use?

Regards,
Carty..

the post looks fine in the software windo. The method extraccion its using proprietary methods

theres is no problem getting the post its looks fine but when the soft post in the blog thats when u get those crappy letters

anyway to get this fix soon ?
coz im really stuck at this
All my post looks pretty fake with these errors

Please excuse me. I will issue an update in a couple of days.

Regards,
Carty..

that will be great coz i CAN NOT create blogs atm

thx

Ok guys, I tried reproducing the error but it never happens here for me. Can you please give me the feed url and the translation setting you use so I could use the same and see if the error happens. If using a PLR article, please mail it to me.

Regards,
Carty..

Bug fixed (hopefully). Update published. Open the software, it will update automatically, add the feed you sent me, post and tell me how it goes.

Regards,
Carty..
